KAJAL TIWARI

FULL STACK ENGINEER

+91 9508440934 | kanjal55567@gmail.com

linkedin.com/in/kajal-tiwari-46802034a | github.com/Kajaltiwari892

PROFESSIONAL SUMMARY

Full Stack Engineer developing responsive applications with React, Next.js, Node.js and Python/FastAPI. Experience spans AI integrations, REST APIs, authentication and frontend performance. Delivered API caching improvements that reduced redundant requests by approximately 40% and a shared component library that reduced duplicate frontend code by 20%.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, Material UI, Redux Toolkit, Jotai, TanStack Query, Recharts, Three.js, GSAP

Backend and Data: Node.js, Express.js, FastAPI, REST APIs, PostgreSQL, SQLAlchemy, Alembic, MongoDB, Mongoose, Supabase, Firebase

AI, Security and Tools: Gemini API, Gamma API, JWT, OAuth / OpenID Connect, Git, GitHub, Storybook, Vercel, Render

PROFESSIONAL EXPERIENCE

Schbang | Full Stack Engineer

Mumbai, India (On-site) | Nov 2025 - Present

- Developed **Node.js and Express.js APIs** for automated post generation, connecting Nano Banana image generation to user-supplied API keys.
- Reduced redundant API calls per page reload by approximately **40%** using TanStack Query for server-state management and response caching, lowering backend load.
- Eliminated approximately **2,500 unnecessary daily requests** across a **500-user platform**, limiting duplicate data fetching and avoidable server processing.
- Improved page responsiveness by approximately **30%** through application performance optimization, enabling smoother interactions across user workflows.
- Automated presentation generation with the **Gamma API**, transforming supplied content into structured slide decks within the application.
- Implemented **HttpOnly cookie-based sessions** to restrict JavaScript access to authentication cookies and strengthen session security.

Bearish OS | Frontend Developer Intern

Remote | Apr 2025 - Jul 2025

- Organized shared UI state with **Jotai atoms**, simplifying component logic through lightweight state management.
- Created a shared **Storybook component library** to standardize interface patterns and reduce redundant frontend code by **20%**.
- Optimized frontend loading with **code splitting, lazy loading and image optimization**; added internationalization (i18n) for multilingual interfaces.
- Configured **Firebase Authentication** and supporting services for user sign-in and account management.

KAJAL TIWARI

FULL STACK ENGINEER | SELECTED PROJECTS

FULL STACK AND AI PROJECTS

Abhyaas | AI-Powered CDS Exam Preparation Platform

Frontend: Next.js, React, TypeScript, Tailwind CSS, Three.js, Motion, Recharts

Backend and AI: Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, Qdrant, Gemini API, JWT, OAuth

Live: abhyaas-two.vercel.app | GitHub: Kajaltiwari892/Abhyaas

- Unified **1,700+ source-linked questions** and a **63-paper archive across 3 subjects**, combining past-paper practice, topic exercises and learner progress tracking.
- Cut primary AI requests by **80% for 50-question practice sets (5 calls to 1)**, lowering prompt and API overhead; validated questions and removed duplicates before storage.
- Delivered past-paper searches and daily plans with **zero AI-generation calls**; processed only new or changed study passages for search to avoid redundant AI-processing costs.
- Engineered an **AI tutor for text and photo questions** with source-linked explanations and step-by-step paper solutions in **10-question batches**; kept AI practice separate from official papers.
- Designed **50-question daily quizzes**, dated study roadmaps and a mistake notebook; scheduled syllabus completion **2 months before the exam** to reserve time for revision.
- Protected learner data through **Google sign-in, 15-minute access tokens and 7-day rotating sessions**; maintained private chats, attempts and progress alongside verified-answer scoring.

ResumeIQ | AI Resume Analysis Platform

Next.js, TypeScript, Node.js, Express.js, MongoDB, Gemini API, PDFKit

Live: new-resume-ai.vercel.app | GitHub: Kajaltiwari892/New-Resume-Ai

- Developed an end-to-end workflow for **PDF/DOCX uploads and pasted resumes**, linking document parsing, career-profile onboarding, AI analysis, editable sections and PDF export.
- Integrated **Gemini-powered resume scoring**, line-level issue detection, suggested rewrites, job-description keyword matching and resume-specific interview questions.
- Established **JWT authentication with refresh-token rotation**, hashed refresh-token storage and password-reset flows; enforced rate limits on authentication and AI endpoints.
- Hardened uploads and API access with **upload limits, security headers, origin restrictions and MongoDB input sanitization**; deployed the frontend on Vercel and backend on Render.

AI Chat Application | Gemini-Powered Conversational Interface

Next.js, TypeScript, Supabase, Gemini API

GitHub: Kajaltiwari892/ChagptClone

- Connected user prompts to **Gemini-generated replies** through a responsive AI chat interface; enabled **Google OAuth sign-in** with Supabase authentication.

Fizzi | Interactive 3D Website

Next.js, Three.js

Live: fizzi-demo.vercel.app | GitHub: Kajaltiwari892/Fizzi

- Accelerated an **interactive 3D web experience** through lazy loading and asset compression, reducing page load time by **0.8 seconds** and improving Lighthouse performance by **15 points**.

EDUCATION

Masai | Frontend Development | Oct 2024 - Feb 2025

Completed hands-on training in **React, responsive design, Tailwind CSS, Firebase, component architecture, state management and Git**.

Applied reusable components, responsive layouts, Firebase authentication and hosting in practical frontend projects.
